

Provides Case Management for Adult Services Inclusive of Disabled, Handicapped, Veteran, In-home Nursing and Low Income Clients

Coordination of services for complicated adult needs is like directing an orchestra. The wrong pace, a flat note, a faulty instrument... and the conductor (or Case Manager) may miss the imperfection. In the world of ongoing crises, tracking everything is difficult. But this slight variation can change your outcome. With the harmony of your interventions, your outcomes will improve and your clients will have a higher likelihood to thrive; reducing duration of services needed.

The challenges across Mental Health, Physical Disabilities or Medical Needs may be different, but gathering accurate and actionable data will help improve the efficiency of your efforts. Coordinating your resources with more intentional and thoughtful strategies will allow your staff to feel more capable, and allow your clients to reap the benefits from yours and their efforts.

Our system is based on collaboration, coordination, and integration of essential data. Using the most advanced technology, Case Management services, delivery of Multidisciplinary interventions, and Monitoring Outcomes becomes available in real-time reporting, automated scheduling and alerts, and advantages such as video conferencing, GPS locators, or talk-to-text data collection. All of this in a secure, cloud-based, commercial off-the-shelf solution.

Access to care, response to treatment, and collaboration / coordination of services can all improve with **VitalClient**. Through telehealth technology, services can now be obtained when location or travel is difficult. With mobile data entry, case workers won't need to take notes only to enter them later. All entries of data, from case workers to clinicians to clients, all immediately enters into the client's secure file for ready access, analytics, and reporting.
